FocusFlow

Screen Flow and Version 1 Plan

Which screens to design, in what order, and how every button connects

Prepared for: Ahmad
Project: FocusFlow, the study companion for university students, as an Android app
Read by: Claude Design, before it designs every screen

This document answers what you asked:

- What Version 1 contains, and what waits
- Every screen the app needs, 56 frames in all, each with its own ID
- Which screen connects to which, through maps and button tables
- Which screen to design first, and in what order
- Exactly what goes on each screen, from top to bottom
- How Claude Design designs them one at a time and tells you what is done

Colour key used in every diagram and table. Screen IDs are the same everywhere and become the artboard names. Tap any ID in this PDF to jump to that screen's card. A dashed outline means a sheet that slides up over another screen.

Entry and account: A, O | Today: T | Subjects: S | Scanner: C | Study: U | Plan: P | Progress: G | Settings: E | Notifications and system: N, Z | Sheets: X

Every screen, by area

Entry and account: A1 A2 A3 A4 A5 A6 A7 O1 O2 O3
Today: T1 X1 X2
Subjects: S1 S2 S3
Scanner: C1 C2 C3 X9
Study: U1 U2 U3 U4 U5 X5 X4 U6
Plan: P1 X6 P4 P2 P5 P3
Progress: G1 G2 G3 X3 G4 G5 G6 X7
Settings: E1 E2 X8 E3 E4 E5 E6 E7 X10 X11
Notifications and system: N1 Z1 Z2 Z3

1. Read this first: rules for Claude Design

Claude Design: follow this every time, for every frame. Ahmad wants a planned app built one screen at a time, not a pile of nice screens that do not connect.

Before you design any screen

1	**Read the design system**	Read project/README.md and project/tokens.json from the FocusFlow design system, and install it on the canvas.
2	**Read this plan**	Read the card for the frame you are about to design, plus "How the app is organised". Follow the card exactly.
3	**Read the components**	For each component on the card, read project/components/<Name>/README.md. Mount the real component from window.FocusFlow. Never draw a look-alike.
4	**Check what already exists**	Read project/canvas.json on this canvas. A frame is done if an artboard with its ID is there.

While you design

1. Design only the next frame in the build order: the first one with no artboard yet. Design a different one only if Ahmad names its ID. One frame per turn, plus the states listed under "Also draw" on its card.
2. Set the artboard title to the ID and name, for example "T1 Today". The file is the ID: A3.dc.html. T1 is the exception and is Main.dc.html. A state is T1-empty.dc.html.
3. Make every phone frame 360 wide and 800 tall. If a screen scrolls, make the frame taller so nothing is cut off. Draw no fake status bar, and leave 24px clear at the top.
4. Use the sample data in this document, so that all frames agree. Never use lorem ipsum.
5. Use design tokens only, never hex values. Use line icons only, never emoji. One primary Button and one coral thing per screen.
6. Add a boolean "dark" tweak to every artboard that sets data-theme on its root element, so that each screen can be seen in both themes.
7. Wire every action on the card as a working link to its target's file, even if that file does not exist yet. Style the <a> itself as the button with the kit's classes, as the README shows. Set is_interactive to true.
8. Do not add screens, buttons or features that are not on the card. If something seems missing, finish the frame and ask at the end.

When you finish a frame, report in exactly this form

```
Done: T1 Today (frame 1 of 56)
Also drew: T1-empty, T1-free, T1-done
Round 1: 1 of 6 done
All frames done so far: T1
Next: X2 Mark Attendance
Assumptions I made: none
Say "next" to continue, or tell me what to change.
```

Also keep one sticky note at the top of the canvas with the same progress line, so that it can be seen at a glance. Put one row of frames on the canvas per area, in the order of this document.

Ahmad: how to run this

Start a new Design in Claude and paste this once:

```
Use my FocusFlow design system. Before you design anything, read its README and its Screen Flow section, and follow "Before you design any screen" at the top of the README. Design frame 1 from the build order. Design one frame at a time, then tell me what you finished and what comes next.
```

After that, reply **next** for each frame, or name one: **design P1 next**. To change something, just say so before saying next. Everything Claude Design needs is already inside the design system: **claude.ai/artifact/E8oWbZeRvxp6Lg2AthpRME**

Words used in this document

Frame	One drawing on the Claude Design canvas. Claude Design calls it an artboard. Each frame here has an ID, such as T1.
Screen	A full page in the app.
Sheet	A panel that slides up from the bottom over the current screen, for quick jobs. Dashed outlines in this document.
State	The same screen in another situation, such as empty or finished. Named like T1-empty. Listed under "Also draw".
Round	A group of frames to design together, in order.
Primary Button	The one coral button that is the main thing to do on a screen.
Fab	The floating plus button at the bottom right.
Component	A ready-made part from the design system, such as Button or Card. Screens are built from these so that they all match.
Token	A named design value, such as the colour "brand" or the spacing "space-4". Using the name keeps every screen consistent.
Prototype	Frames joined by working links, so that you can tap through the app before it is built.
Thumb zone	The bottom third of the screen, which a thumb reaches easily on one hand.

2. The short answers

FocusFlow in one line: a student scans their timetable once, and the app tells them what's next, every day, in one glance.

Your question	Answer
How many screens?	**56 frames in Version 1:** 41 full screens, 11 sheets and pop-ups, 1 notification set and 3 system states. They also include 22 extra state drawings, such as empty screens. 16 more frames wait for later versions.
Which screen first?	**T1 Today, not login.** Today sets the look for the whole app. Sign-up comes in round 5, once the look is settled. Full order in section 8.
What is in Version 1?	The daily study loop: Today, Subjects, the scanner, Attendance, Grades and CGPA, Exams and Deadlines, Assignments, Timetable, Deep Work, Flashcards, Study streaks, Reminders and Settings.
What waits?	Notes, Budget, Goals, Daily Routine, the 3D cube, workspaces and the LMS sign-in. They stay on your web app, so nothing is lost, and anyone connected to the LMS on the web still gets synced data in the phone app.
How is the app organised?	Five tabs: **Today, Subjects, Study, Plan, Progress.** A plus button adds anything. Settings sits behind the student's picture.
How do screens connect?	332 connections, listed on each screen's card and drawn on 10 maps. I checked them with a script: no broken links, no screen that cannot be reached, and no dead ends.
Will Gen Z find it easy?	That is what this plan is built around: common jobs take one tap, most finish from the notification, a student reaches their own classes within a minute, and the app never guilt-trips them. Section 4 explains each choice. Real testing is still needed.
Anything blocking launch?	**Yes: delete account.** Google Play requires it, and your app does not have it yet. The screen is designed (E7), and the server part must be built. See section 13.

My honest advice. Fifty-six frames is a lot for one person, so if time runs short, ship rounds 1 to 3 plus sign-up first. Do not be tempted to add Notes or Budget back before launch. A small app that is excellent at "what's next?" will be kept. A big app that is average at everything gets deleted in a week.

3. Who we are designing for

University students, mainly Gen Z, on Android, starting in Pakistan: the app's defaults are Pakistan time, PKR and a 4.0 CGPA scale. Design for the student below on the right. If this works for them, it works for everyone.

Sara, the organised one	Hamza, the last-minute one (design for this student)
Semester 5, CGPA 3.42. Opens the app on purpose every morning. Enters marks the same day and wants to reach 3.6. Will explore every feature and show it to friends.	Semester 3, attendance around 68%, forgets deadlines until the night before. Opens the app almost only from a notification. Will not fill in a long form, ever. If it takes more than a tap or two, it does not happen.

The moments that shape each screen

Moment	Situation	What they need	Frames
Walking to class	One hand, outdoors, bright sun	Which class, which room, what time, in two seconds	T1
Class just ended	Standing up, packing a bag	Mark attendance in one tap, ideally from the notification	N1 X2
Between classes	On a bench, 10 free minutes	Review the cards that are due	U6
Deep study	Desk or library, phone face up	A calm timer with nothing else on screen	U2
Night before an exam	In bed, lights off	Dark theme, the countdown, the flashcards. Calm, not alarm	X6 U5
Marks just came out	Anywhere	Add a mark and see the CGPA move	X3 G2

What this audience expects

- **Fast or gone.** If adding something takes longer than remembering it, they will not add it. Scan, one tap, sensible defaults.
- **Worth showing a friend.** They notice design. A streak or a CGPA ring should look good enough to screenshot.
- **Theirs.** Mascots and palettes make it feel personal. The app already has both, so bring them forward early.
- **Honest and on their side.** No guilt, no fake urgency, no tricks. They are tired of being nagged by apps.
- **Works on their phone.** Assume a mid-range Android, patchy data and little free space. The dark theme matters for late-night study.

These are working assumptions from your brief and your app's defaults, not research. The 12 testers Google requires are your first chance to test them. Watch one use the prototype without helping for five minutes: that teaches more than any extra screen.

4. Thirteen design decisions

The choices behind this plan, each with its reason and what it replaces. Tell me if you disagree with any: each can be changed before Claude Design builds it.

Decision	Why	Instead of
Five tabs named by what the student is doing	Today, Subjects, Study, Plan, Progress. Each answers one question. Nothing important hides behind More.	The web's six items, with nine features behind More and 9px labels.
Settings behind the Avatar, not a tab	Students open Settings rarely. A tab is prime space and should earn its place every day. The top right is hard to reach, which is fine for something rare.	A "Me" tab mixing grades with settings.
Design for the student who forgets	If a last-minute student with 64% attendance can use it from a notification, the organised student will be fine too. So the common jobs finish in one tap.	Designing for the ideal, always-organised student.
No login wall on first open	A Welcome screen says what the app is first, and Google sign-in comes first because it needs no password.	Opening straight on the Log In form, as the web does.
Onboarding ends in real data	Three steps: mascot, timetable, reminders. The student reaches their own classes within a minute. That moment decides whether they stay.	The web's six steps, which ask for phone, birthday and pronouns before giving anything back.
Ask for notifications after the timetable	The prompt can show their real next class, so the reason is obvious. People are far more likely to say yes.	Asking on first open, with no reason given.
Attendance saves on one tap	Marking happens standing up, packing a bag. There is no Save button, and the likely answer is the biggest.	A form with a status select and a Save button.
Show "You can miss 4 more classes"	A percentage is not what students actually want to know. The real question is how many more they can miss, or how to get back above the limit. Answer it in words.	A percentage alone.
Sheets for quick jobs, full screens for long forms	Sheets keep the student in place and within thumb reach. A long form with many fields deserves its own screen.	Centred pop-ups everywhere, as on the web.
One timer, one history	Deep Work and Study hours are the same idea twice. One timer and one history screen are easier to understand.	Two separate timers.
One board column at a time	Three columns do not fit at 360 wide. Pills switch columns, and a swipe moves a card.	Shrinking the desktop board, or sideways scrolling.
Flat before fancy	The cube, atom chart and 3D skyline are memorable but slow and hard to read on a phone. V1 uses flat versions that are clear at a glance.	Rebuilding the 3D scenes before launch.
Streaks reward and never punish	After a missed day the app says "Fresh start today". Guilt makes students delete apps.	"You broke your streak."

5. What Version 1 contains

The test for Version 1: does a student need this during a normal week of classes? If not, it waits. Nothing is deleted: every feature below stays on your web app until it reaches the phone.

In Version 1

Feature	Frames	Why it made the cut
Today home screen	T1	The reason to open the app each day
Subjects and the subject page	S1, S2, S3	Everything in FocusFlow hangs off a subject
Screenshot scanner	C1, C2, C3, X9	The signature feature: no typing a timetable
Attendance	X2, G4, G5	A daily worry: fall below the limit and a student can be barred
Grades and CGPA	G2, G3, X3	What students care about most
Exams and deadlines	P1, P4, X6	The fear of missing one keeps the app installed
Assignments	P2, P5	Same reason
Timetable	P3	A quick reference
Deep Work timer and history	U2, U3	Also replaces the separate Study hours page
Flashcards	U4, U5, U6, X4, X5	The best use of ten free minutes
Study streaks	G6, X7	The habit hook for this age group
Reminders and notifications	N1, E3, O3	Most of the app's value reaches students here
Sign-in and setup	A1 to A7, O1, O2	Needed to use anything
Personal touches	E4, E5, X8	Mascots, 24 palettes, dark mode and 26 languages already exist, and cost little
Account deletion	E7	Required by Google Play

Later versions (do not design these now)

ID	Frame	Why it waits
L1	Notes list	Students already have a notes app. Add once the daily loop is proven.
L2	Note editor	Needs a good formatting toolbar above the keyboard, which is real work.
L3	Budget home	Useful, but it is not study. Costs three screens.
L4	Add income or expense	Comes with Budget.
L5	Savings goal	Comes with Budget.
L6	Goals list	Long-term, not daily. Streaks cover motivation in V1.
L7	Goal detail with milestones	Comes with Goals.
L8	Daily Routine	Personal routine items beyond classes. The class timetable is already in P3.
L9	Subject cube view	The web's cube relies on 3D that React Native lacks. A lovely extra, not a need.
L10	Subject progress atom chart	Beautiful, but hard to read at 360 wide.

ID	Frame	Why it waits
L11	Workspaces and widget chooser	Power-user feature. Today is fixed in V1 so that it stays clear.
L12	University LMS connection	The sign-in depends on the browser. Students connected on the web still get synced data in the app.
L13	Custom colours and font choice	24 palettes are enough to start.
L14	WhatsApp reminder setup	Needs a third-party key that each student types in.
L15	Android home screen widget	Next class on the home screen. A great first update.
L16	In-app notification inbox	Not needed while notifications can be answered directly.

6. How the app is organised

The rules every screen follows. The next page shows the whole app on one sheet.

The five tabs

Tab	Icon	Question it answers	What it holds
T1 **Today**	house	What's next?	Current or next class, snapshot tiles, today's classes, streak
S1 **Subjects**	graduation-cap	How is each course going?	Every course and its own page, with its attendance, grades and deadlines
U1 **Study**	zap	What can I study right now?	Deep Work timer, Flashcards
P1 **Plan**	calendar-days	What's coming?	Exams and Deadlines, Assignments, Timetable
G1 **Progress**	trending-up	How am I doing overall?	Grades and CGPA, Attendance, Study streaks

Navigation rules

Bottom tabs	Five tabs and always labelled: Today, Subjects, Study, Plan, Progress. They are the only top-level navigation. No side drawer.
Going deeper	Opening a subject, deck or grade pushes a new screen that slides in from the side, with a back IconButton at top left.
Android back	Closes things in order: a Sheet, then a pop-up, then the current screen. On a tab's first screen it goes to Today. From Today it leaves the app.
Sheets	Slide up from the bottom. Use them for quick jobs and choices. Close by dragging down, tapping outside, or Android back.
Pop-up	Only X10 Confirm Delete, for something that cannot be undone.
Fab (the plus button)	Bottom right on Today, Subjects and all three Plan views. It opens X1 Add Menu.
Where the tabs hide	Entry, onboarding, scanner, forms, Settings, Focus Timer and Flashcard Study. Everywhere else they stay.
Saving	Forms have one Save stuck above the keyboard. Switches, attendance and palettes save at once with no Save button.
Leaving a form	Unsaved changes: ask with X11. No changes: just go back.
Returning	After a sheet or a form, return to where the student was. Keep the scroll position.

The whole app on one page

First run: open the app, make an account, set up (A3 Log In, A6 and A7 reset password are the other ways in)

A1 Splash → **A2** Welcome → **A4** Sign Up → **A5** Verify Email → **O1** Your Study Buddy → **O2** Bring In Your Timetable → **O3** Turn On Reminders → **T1** Today

Bottom tabs: Today, Subjects, Study, Plan, Progress

Today
What's next?

- **T1** Today
- **X1** Add Menu
- **X2** Mark Attendance

Subjects
Each course

- **S1** Subjects
- **S2** Subject Page
- **S3** Add or Edit Subject
- **C1** Scan Start
- **C2** Reading
- **C3** Review and Save
- **X9** Edit Scanned Row

Study
Start now

- **U1** Study Home
- **U2** Focus Timer
- **U3** Focus History
- **U4** Flashcard Decks
- **U5** Deck Page
- **U6** Flashcard Study
- **X4** Add or Edit Card
- **X5** New or Edit Deck

Plan
What's coming

- **P1** Exams and Deadlines
- **P2** Assignments
- **P3** Timetable
- **P4** Add or Edit Deadline
- **P5** Add or Edit Assignment
- **X6** Deadline Details

Progress
How am I doing

- **G1** Progress Home
- **G2** Grades and CGPA
- **G3** Subject Grades
- **G4** Attendance
- **G5** Subject Attendance
- **G6** Study Streaks
- **X3** Add or Edit Marks
- **X7** Add or Edit Habit

Settings
From the Avatar

- **E1** Settings
- **E2** Profile
- **E3** Reminders
- **E4** Appearance
- **E5** Language
- **E6** Privacy and Terms
- **E7** Delete Account
- **X8** Mascot Picker
- **X10** Confirm Delete
- **X11** Are You Sure

Outside the tabs: from the phone, and states that can appear anywhere

N1 Notifications | **Z1** Loading and Slow Start | **Z2** Offline | **Z3** Something Went Wrong | **A3** Log In | **A6** Forgot Password | **A7** Reset Password

7. All 56 frames

In build order. The first column is the number to count progress by. Each ID becomes the artboard's name, for example **A3 Log In**.

No.	ID	Frame	Type	Round	Its job
1	T1	**Today**	Screen	1	Answer "what's next?" in two seconds.
2	X2	**Mark Attendance**	Sheet	1	Mark one class in one tap, while packing a bag.
3	X1	**Add Menu**	Sheet	1	One place to add anything, within reach of the thumb.
4	S1	**Subjects**	Screen	1	See every course at a glance and open one.
5	S2	**Subject Page**	Screen	1	Everything about one course in one scroll. It shows a little of each thing and links to the full screen.
6	S3	**Add or Edit Subject**	Screen	1	Add a course by hand when the scanner is not used, or correct one.
7	P1	**Exams and Deadlines**	Screen	2	Everything with a due date, sorted by what's next. The first view of the Plan tab.
8	X6	**Deadline Details**	Sheet	2	Answer "when and where is it?" without opening a form. Reading is far more common than editing.
9	P4	**Add or Edit Deadline**	Screen	2	Add an exam, quiz or deadline quickly.
10	P2	**Assignments**	Screen	2	Move work from To-do to Done. On a phone, one column shows at a time.
11	P5	**Add or Edit Assignment**	Screen	2	Hold everything about one assignment, including whether it is submitted.
12	P3	**Timetable**	Screen	2	See the week and find a class quickly.
13	U1	**Study Home**	Screen	3	Pick something and start studying within one tap.
14	U2	**Focus Timer**	Screen	3	A calm timer with nothing else on screen. This is the Deep Work screen.
15	U3	**Focus History**	Screen	3	See where study time went. This merges the web's Deep Work history and Study hours into one screen.
16	U4	**Flashcard Decks**	Screen	3	See which decks need review today.
17	U5	**Deck Page**	Screen	3	Start studying this deck, or manage its cards.
18	X5	**New or Edit Deck**	Sheet	3	Name a deck and connect it to a subject.
19	X4	**Add or Edit Card**	Sheet	3	Add many cards quickly, one after another.
20	U6	**Flashcard Study**	Screen	3	Review with one thumb on a bench between classes.
21	G1	**Progress Home**	Screen	4	Answer "how am I doing?" honestly and kindly.
22	G2	**Grades and CGPA**	Screen	4	Show the CGPA first, then what is driving it.
23	G3	**Subject Grades**	Screen	4	See and add the marks for one subject.
24	X3	**Add or Edit Marks**	Sheet	4	Enter one mark in a few seconds, with big number entry.
25	G4	**Attendance**	Screen	4	Show which subject is in danger, before anything else.

No.	ID	Frame	Type	Round	Its job
26	G5	Subject Attendance	Screen	4	Tell the student where they stand with one subject, and let them correct any class.
27	G6	Study Streaks	Screen	4	Reward showing up. Never scold.
28	X7	Add or Edit Habit	Sheet	4	Name a daily habit.
29	A1	Splash	Screen	5	Show the brand for a moment while the app works out where to go.
30	A2	Welcome	Screen	5	Say what FocusFlow is in one line, then get out of the way. This replaces a login wall.
31	A4	Sign Up	Screen	5	Create an account with the fewest possible fields.
32	A5	Verify Email	Screen	5	Confirm the email with a code, without leaving the app.
33	A3	Log In	Screen	5	Get a returning student back in fast.
34	A6	Forgot Password	Screen	5	Start a password reset.
35	A7	Reset Password	Screen	5	Finish the reset on one screen. The web splits this into two pages.
36	O1	Your Study Buddy	Screen	5	Step 1 of 3. Make the app feel like theirs in ten seconds.
37	O2	Bring In Your Timetable	Screen	5	Step 2 of 3. Reach something useful within a minute. This is the moment FocusFlow proves itself.
38	C1	Scan Start	Screen	5	Choose what to scan and where the picture comes from. This is FocusFlow's signature feature.
39	C2	Reading	Screen	5	Show progress honestly while the picture is read.
40	C3	Review and Save	Screen	5	Let the student check everything. Nothing saves without this step.
41	X9	Edit Scanned Row	Sheet	5	Fix one row the reader got wrong.
42	O3	Turn On Reminders	Screen	5	Step 3 of 3. Ask for notification permission when it is clearly useful.
43	E1	Settings	Screen	6	Find any setting in one tap. Reached only from the Avatar on Today or the icon on Progress, because it is used rarely.
44	E2	Profile	Screen	6	Change how the student appears.
45	X8	Mascot Picker	Sheet	6	Choose a study buddy. A small moment of fun.
46	E3	Reminders	Screen	6	Keep the student in control of every nudge.
47	E4	Appearance	Screen	6	Make the app theirs, and show the change right away.
48	E5	Language	Screen	6	Choose from 26 languages.
49	E6	Privacy and Terms	Screen	6	Say plainly what is stored and why.
50	E7	Delete Account	Screen	6	Let a student delete their account and data. Google Play requires this.
51	X10	Confirm Delete	Pop-up	6	Stop someone before something they cannot undo.

No.	ID	Frame	Type	Round	Its job
52	X11	Are You Sure	Sheet	6	A gentle check for anything that can be redone: log out, leave without saving, end a focus session.
53	N1	Notifications	Set	7	The app's most-seen design. A student should be able to finish many jobs from here without opening the app.
54	Z1	Loading and Slow Start	Set	7	Keep waiting calm. The free server sleeps, so the first open of the day can take up to a minute.
55	Z2	Offline	Set	7	Stay useful with no internet.
56	Z3	Something Went Wrong	Set	7	Say what happened and offer a way forward. Never a dead end.

8. Build order

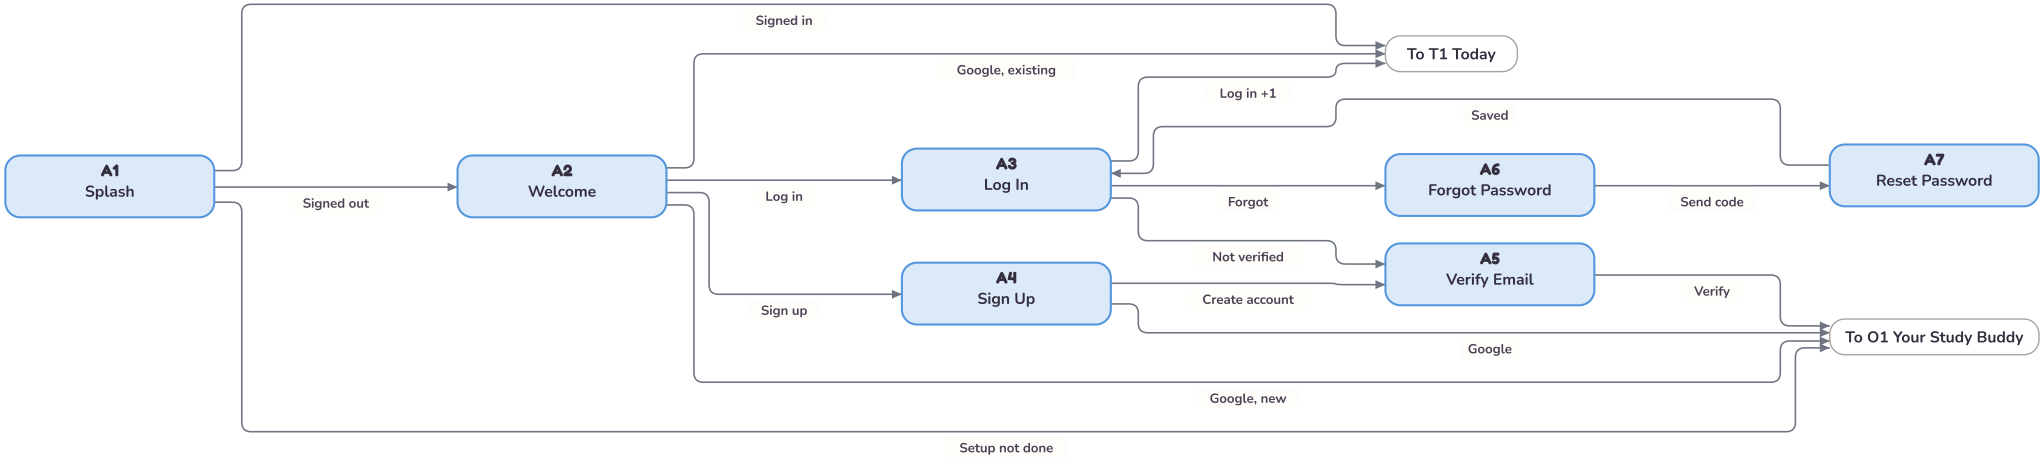

Follow these rounds in order. After each one you can tap through a working prototype, and it is worth showing a friend before starting the next.

Round	Frames	Why this order
0. Foundation	Already done: the FocusFlow design system	Colours, type, spacing, 26 components, logos and mascots are ready. Nothing to design here.
1. The heart of the app 6 frames	T1 X2 X1 S1 S2 S3	Today sets the look for everything else. If a student cannot tell what is next in two seconds, nothing after this matters. Design it first, not login.
2. Never miss anything 6 frames	P1 X6 P4 P2 P5 P3	Deadlines and the timetable are why a student keeps the app installed.
3. Study 8 frames	U1 U2 U3 U4 U5 X5 X4 U6	Focus timer and flashcards are the two screens used in the middle of real work. They must be calm and work with one thumb.
4. Progress 8 frames	G1 G2 G3 X3 G4 G5 G6 X7	Grades and attendance reward the student for everything entered in rounds 1 to 3.
5. Getting in 14 frames	A1 A2 A4 A5 A3 A6 A7 O1 O2 C1 C2 C3 X9 O3	Sign-up and the scanner come after the look is settled, so the first thing a student sees matches the real app.
6. Settings 10 frames	E1 E2 X8 E3 E4 E5 E6 E7 X10 X11	Used rarely. They reuse ListRow and Field, so they go quickly.
7. Edges 4 frames	N1 Z1 Z2 Z3	Notifications and failure states make the app feel finished.
8. Dark and Urdu check	T1, U2, U6, P1, G5	Each frame already has a dark tweak. Look at these five in dark, then T1 in Urdu to check the right-to-left layout.
9. Store listing	Icon, feature graphic, screenshots	Made from finished frames. Screenshots: T1, S2, U2, U6, C1.

Rule of thumb. After each round, give your phone to one friend, give them one small job such as "mark today's class as attended", and watch silently. Wherever they hesitate is what needs fixing next. Fix it before moving on: it is cheaper now than after later frames have copied it.

9. Screen maps: Getting in

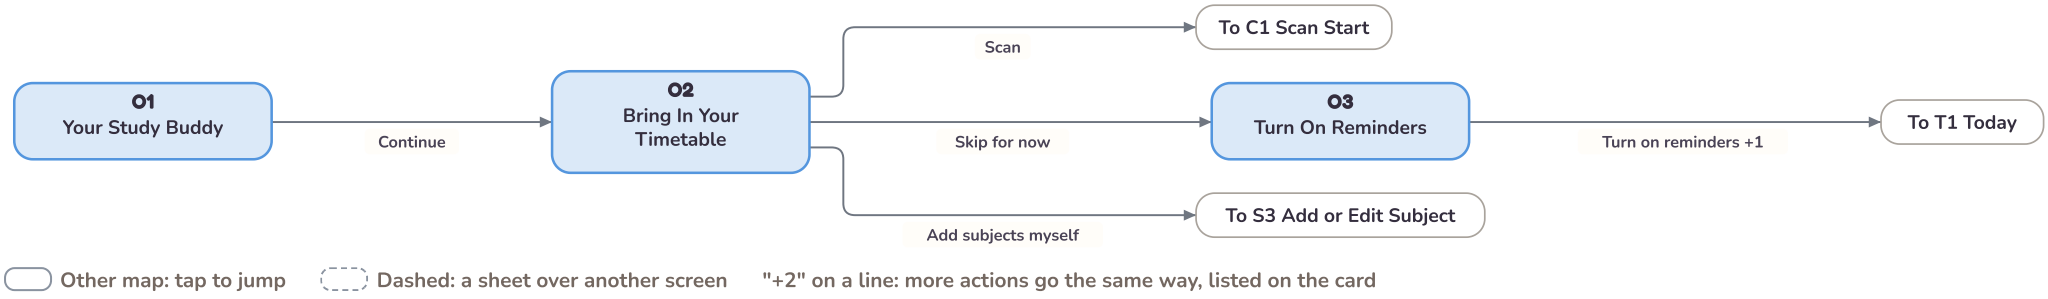

From the first open to a signed-in student. Google is the short route. White boxes belong to another map; tap one to jump to it. Log In and Sign Up also link to each other, and Sign Up links to E6 for the terms.

Other map: tap to jump Dashed: a sheet over another screen "+2" on a line: more actions go the same way, listed on the card

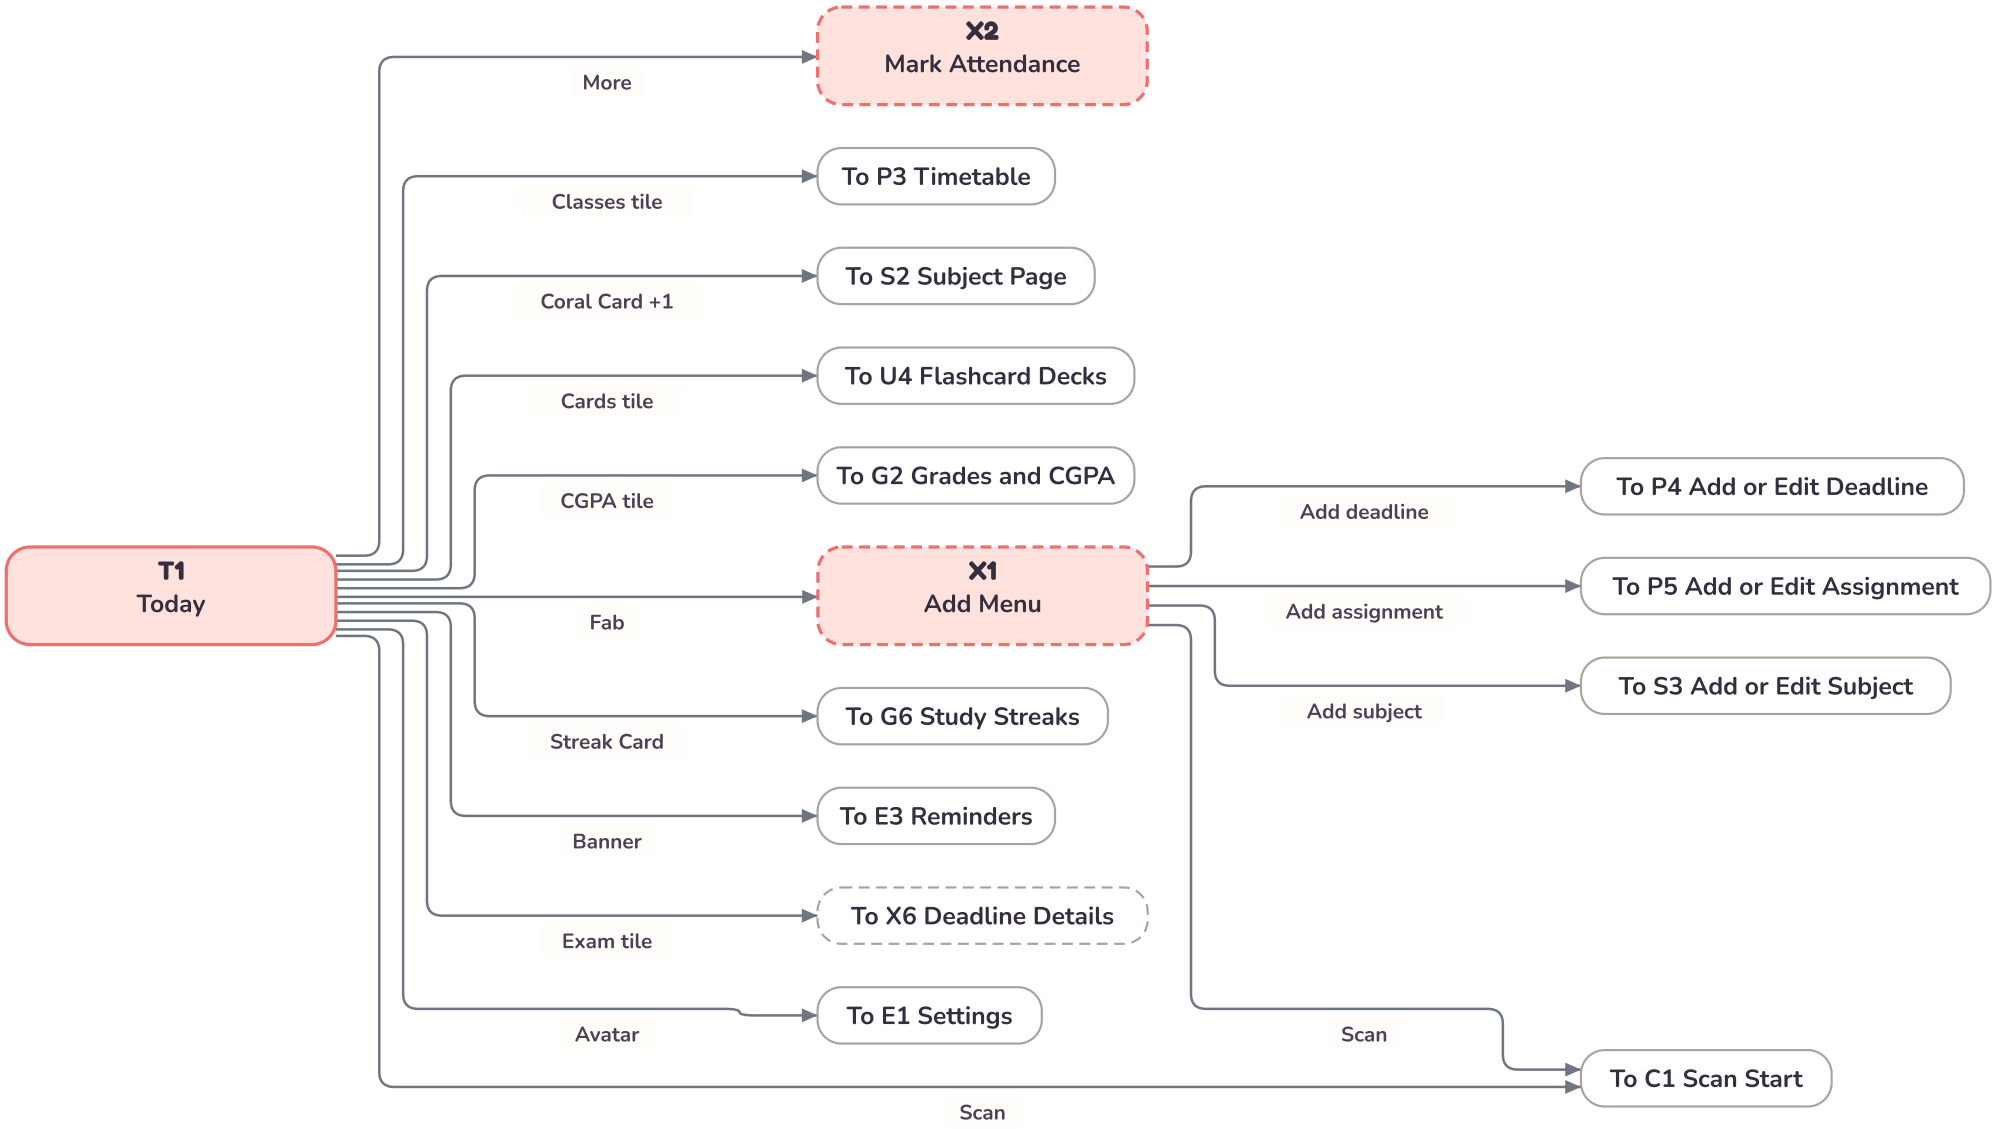

Map 2 of 10: First-run setup

Three steps that end on the student's own classes. Scanning the timetable is the moment the app proves itself.

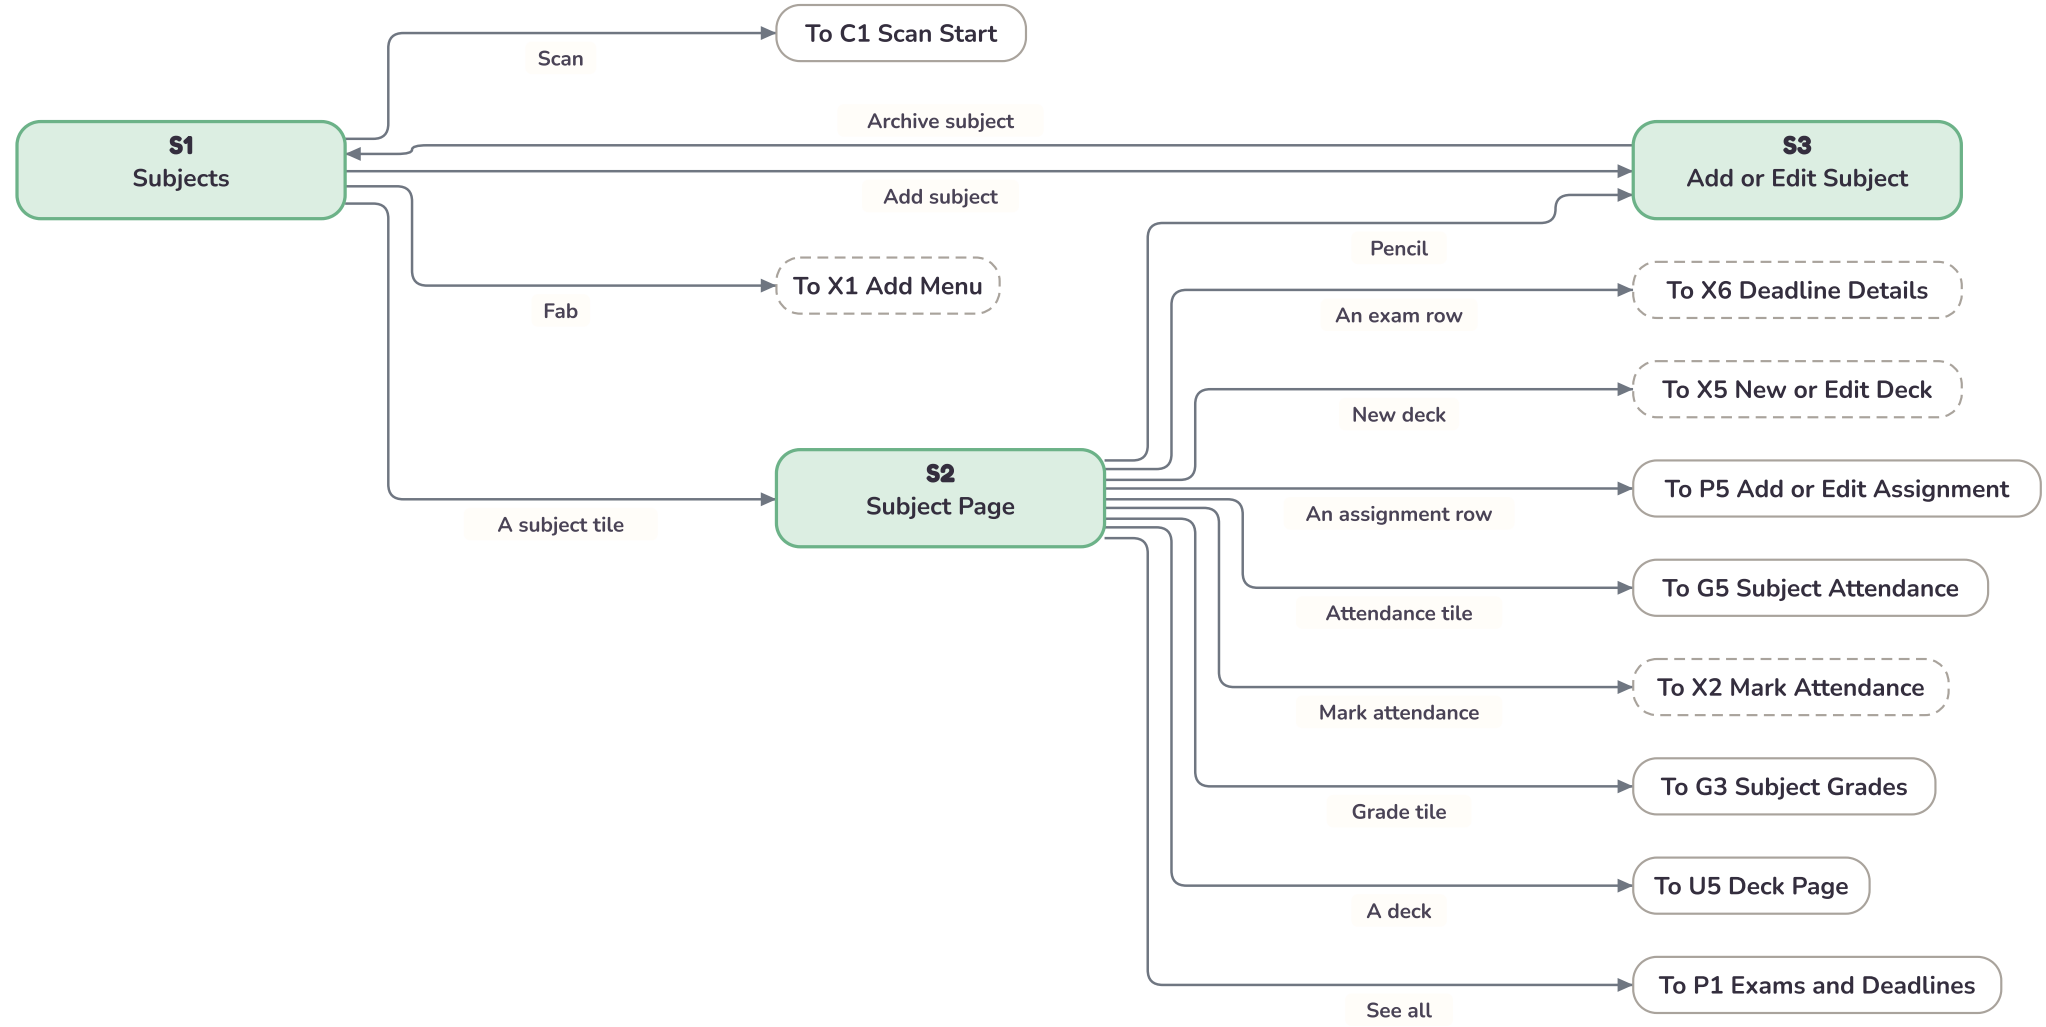

Map 3 of 10: Today

Today is the hub. Almost everything is one tap from here. Bottom tabs are left out because every tab screen has them. Dashed boxes are sheets.

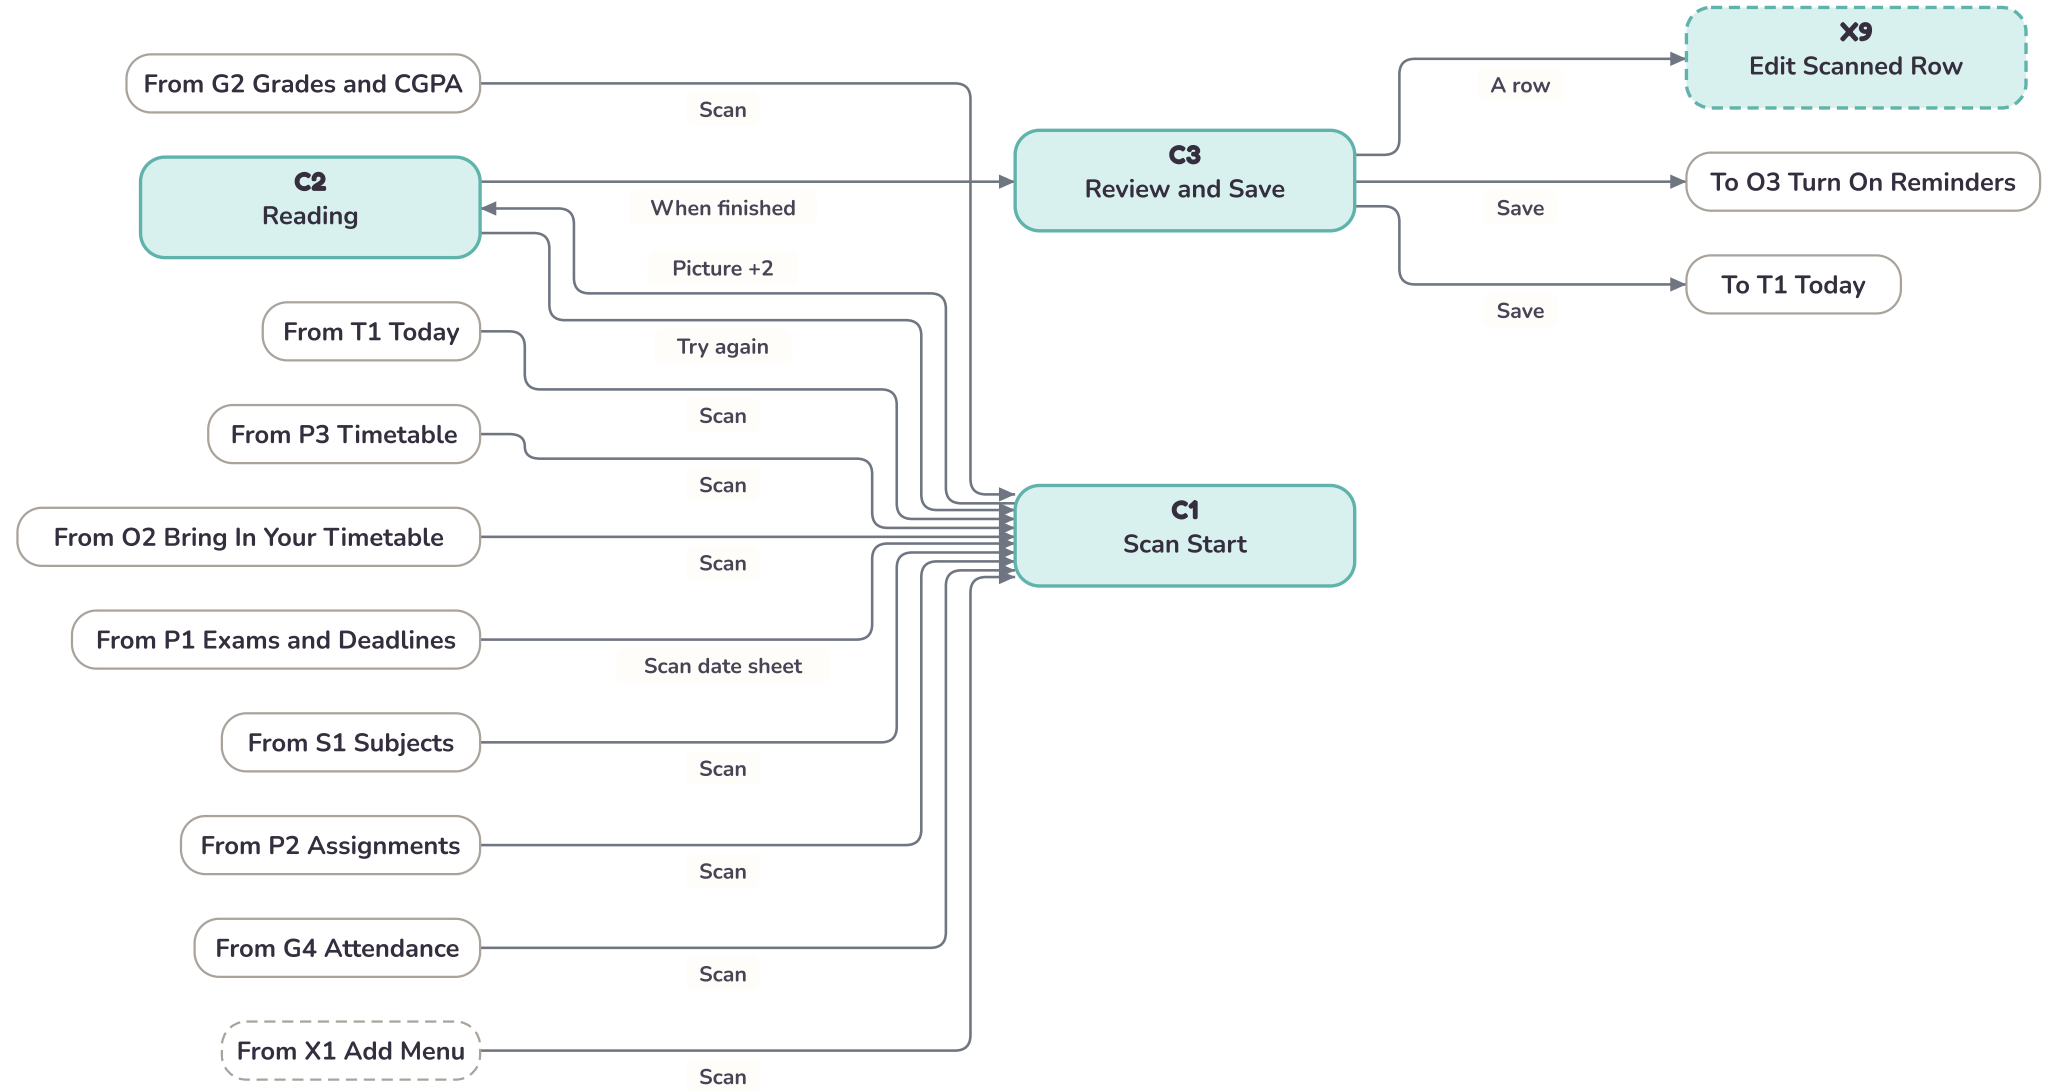

Map 4 of 10: Subjects

The subject page shows a little of everything, then links to the full screen. Nothing is drawn twice.

Map 5 of 10: The scanner

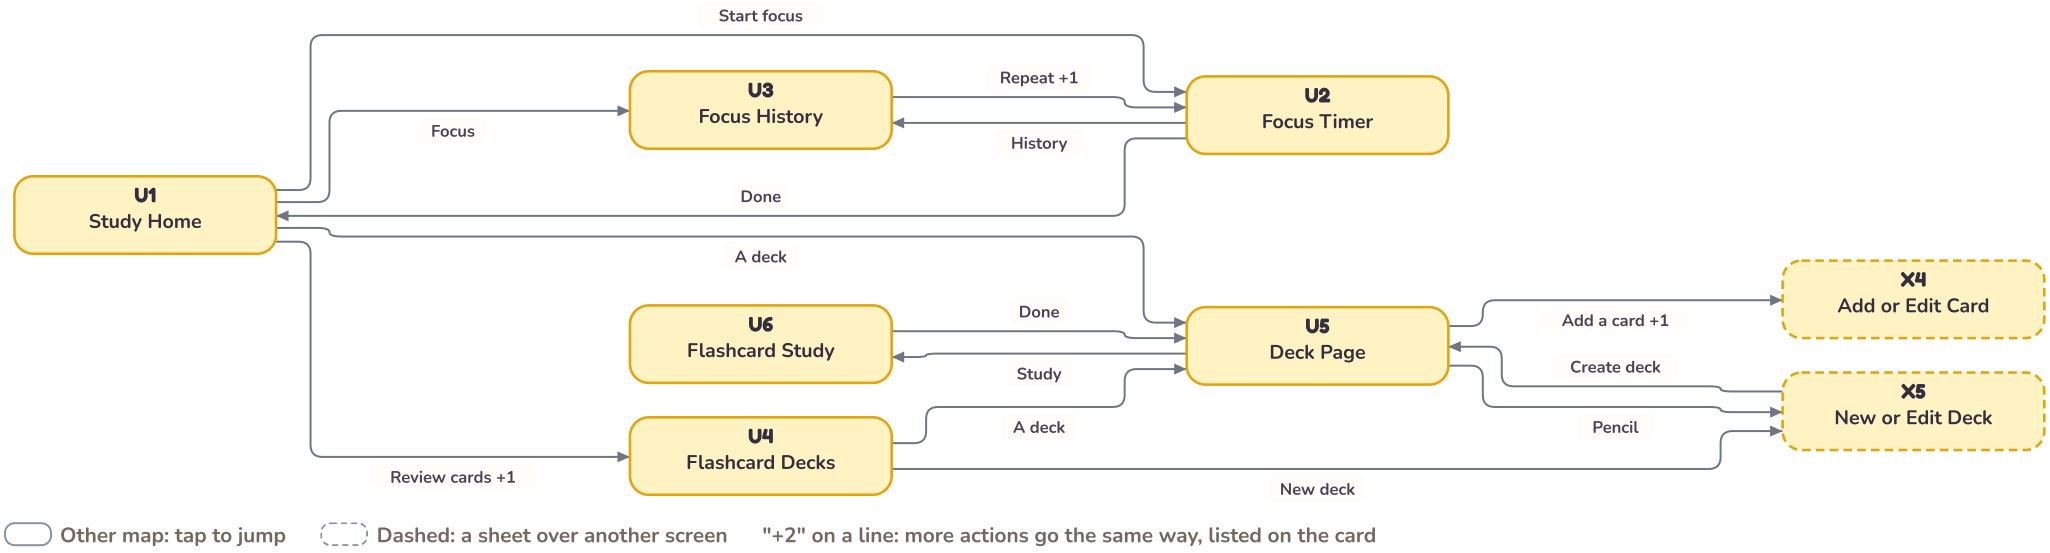

The scanner can start from many places, always runs the same three steps, and returns to where it began.

Other map: tap to jump Dashed: a sheet over another screen "+2" on a line: more actions go the same way, listed on the card

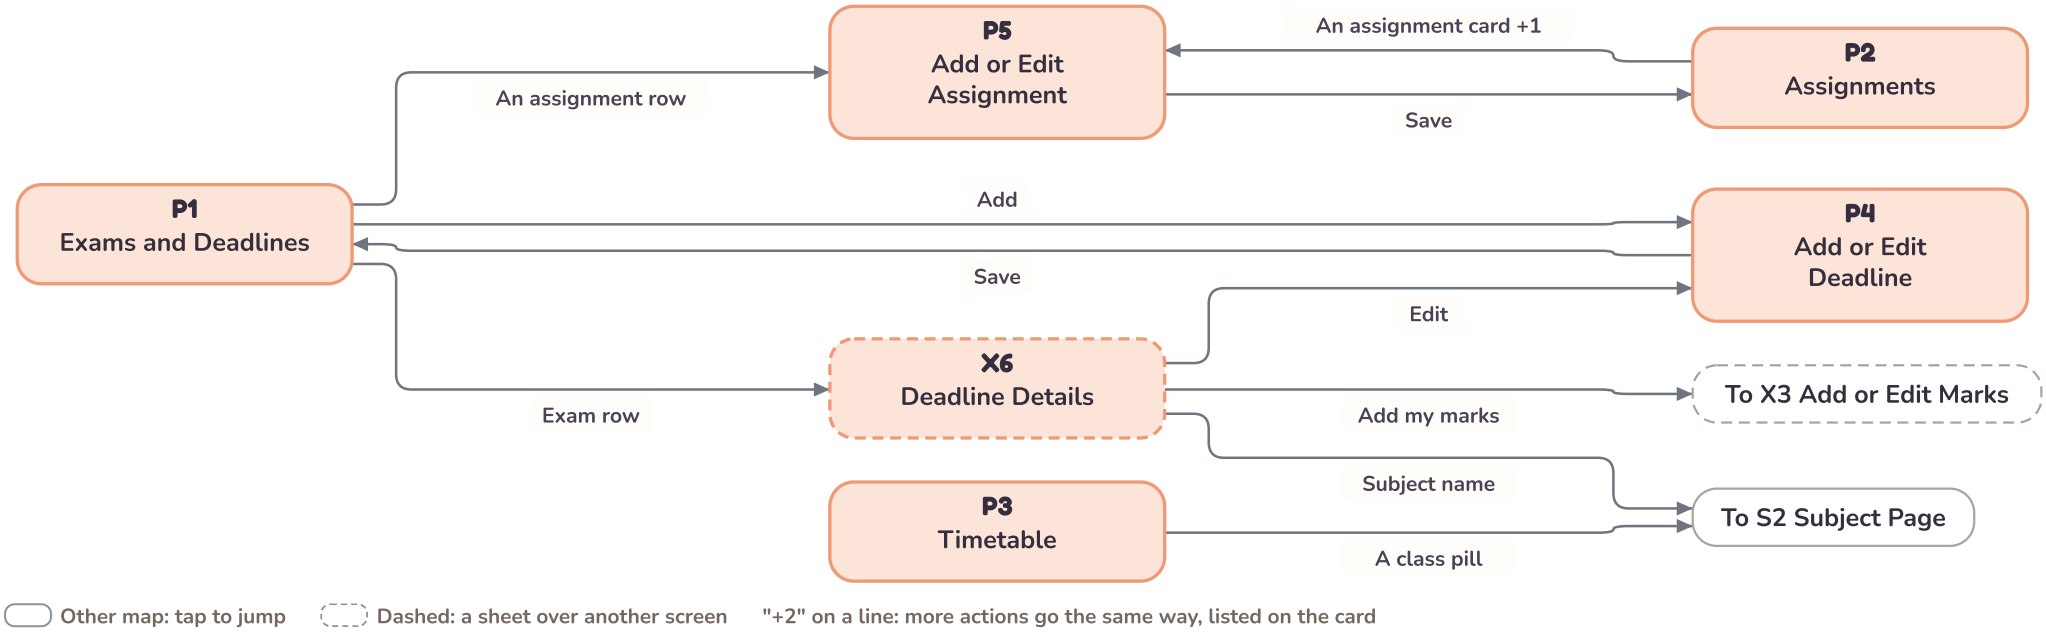

Map 6 of 10: Study

Two calm full-screen modes, the Focus Timer and Flashcard Study. Both hide the bottom tabs.

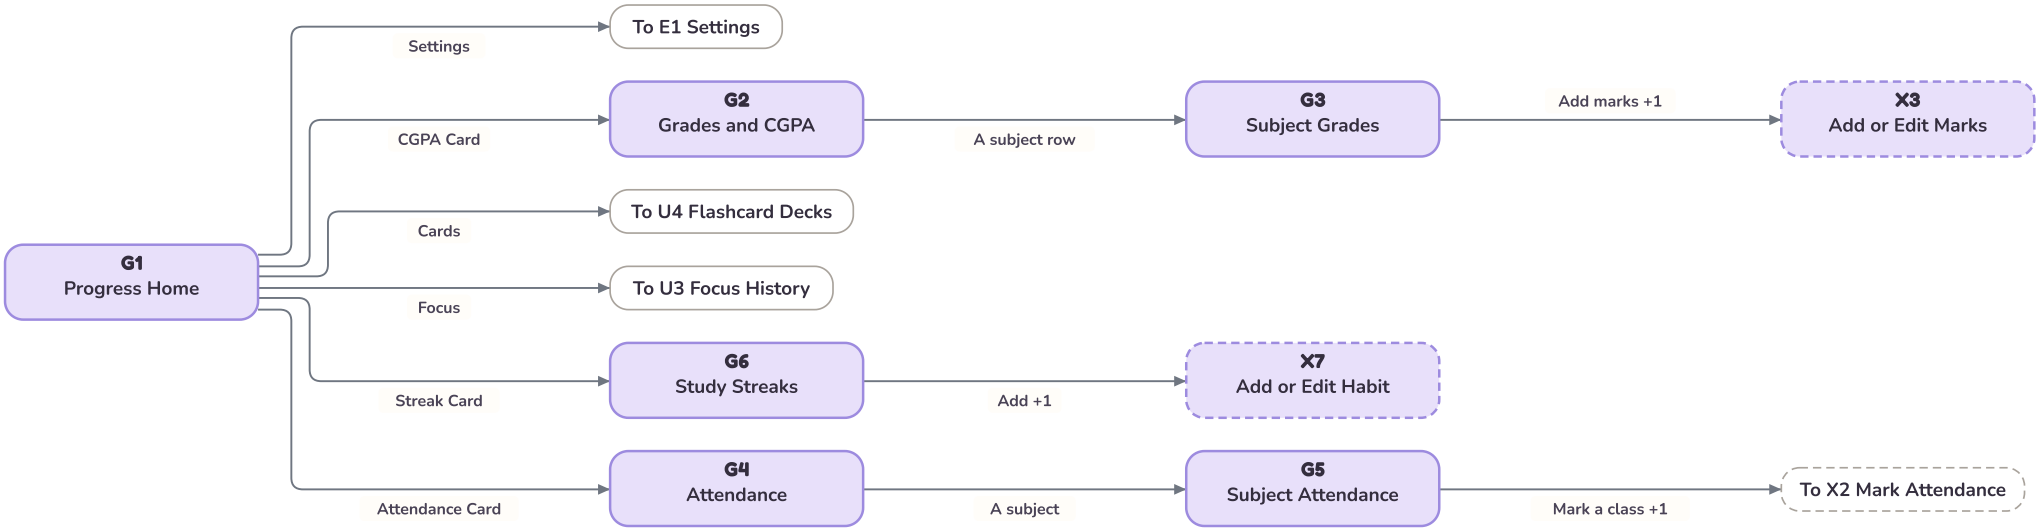

Map 7 of 10: Plan

P1, P2 and P3 are the three views of the Plan tab: the SegmentedControl at the top switches between them. On all three the Fab opens X1, and the empty state links to C1. Those links are left off to keep this map clear.

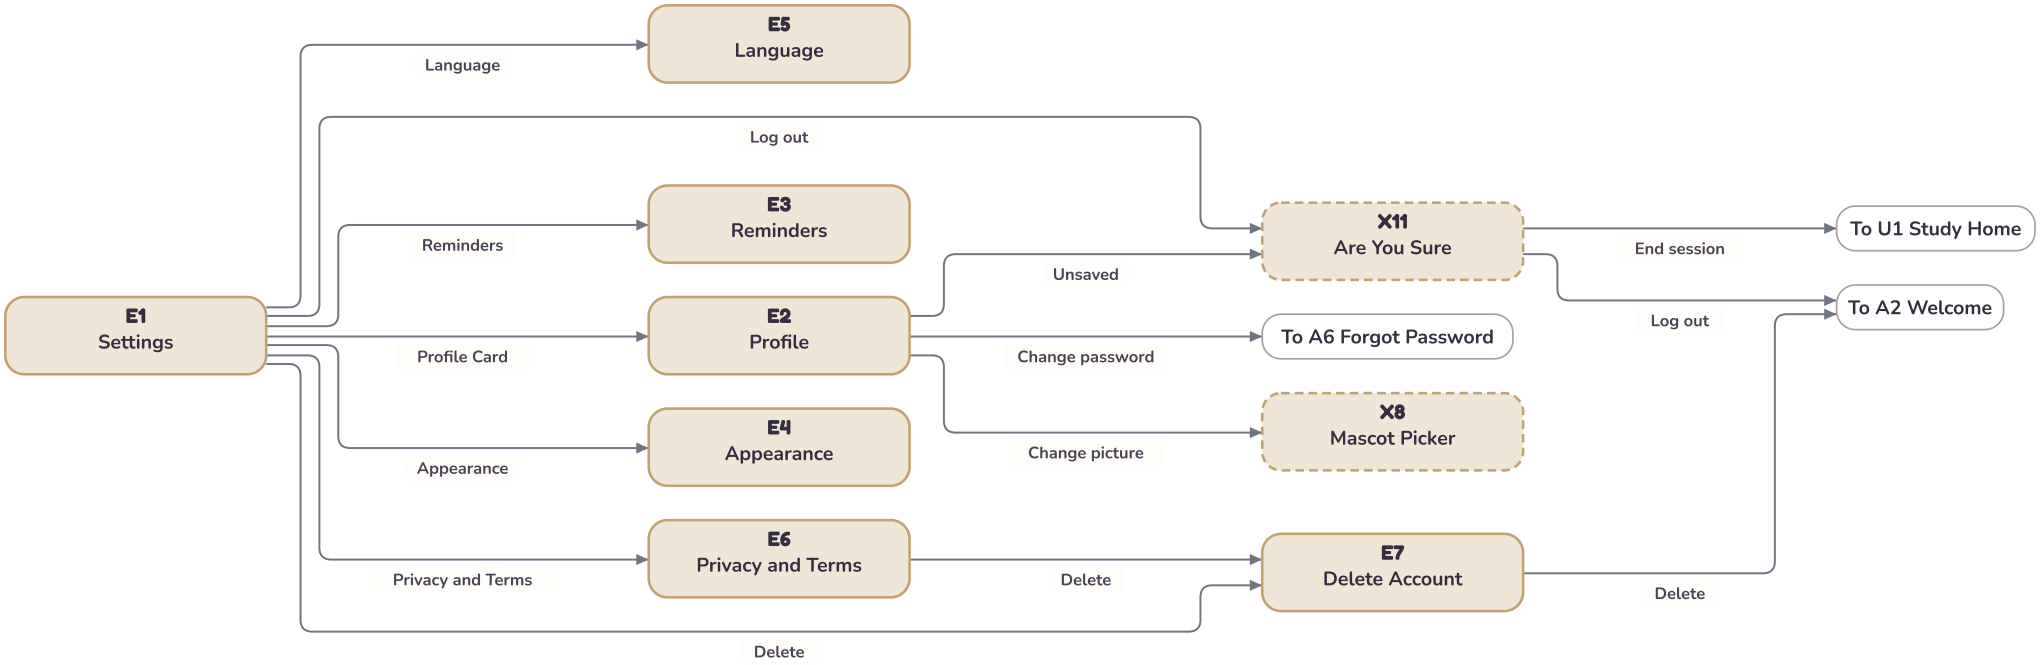

Map 8 of 10: Progress

Grades and attendance each go from an overview to one subject, so a student can always see why a number is what it is. Empty states also link to C1 and S3.

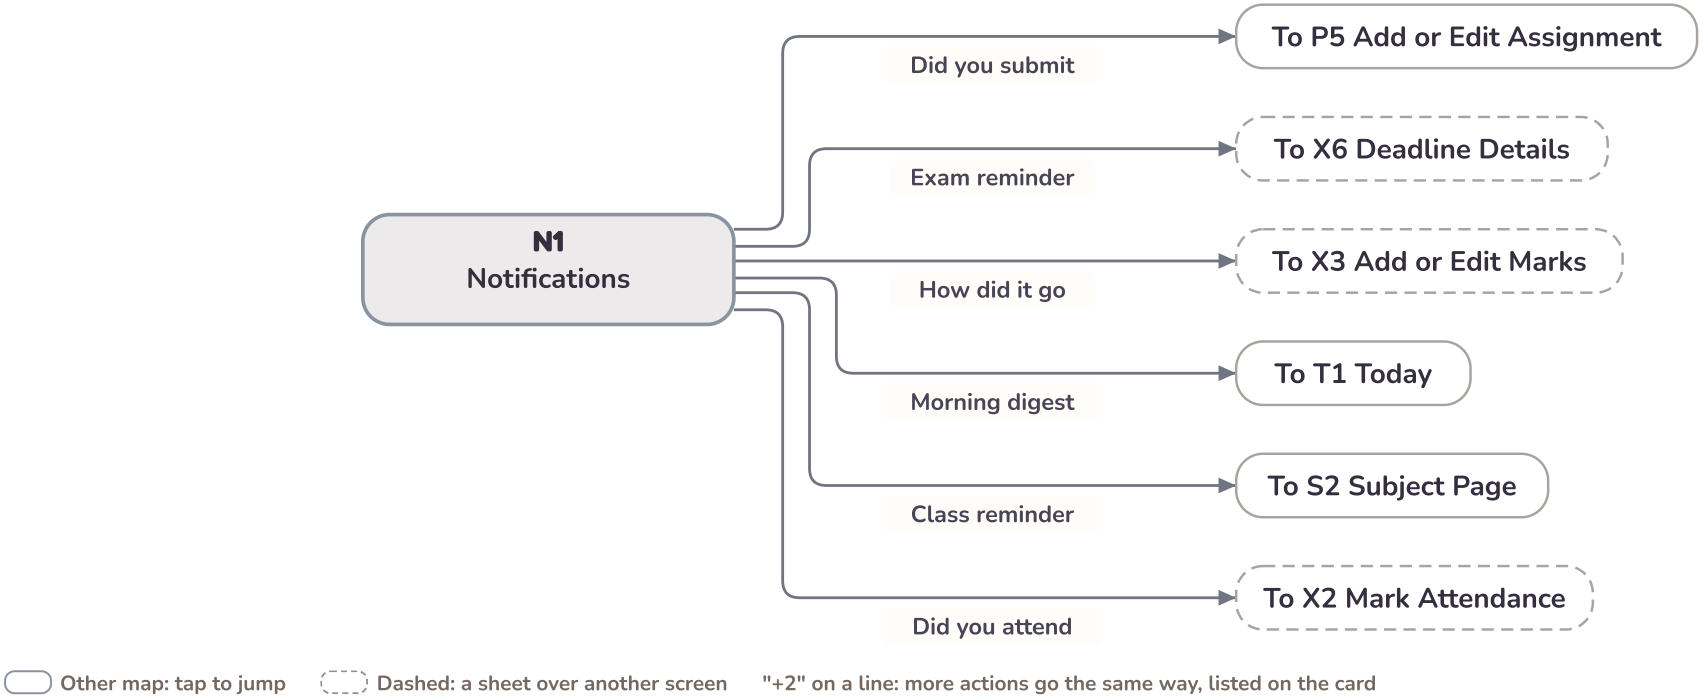

Map 9 of 10: Settings

Reached from the Avatar on Today, or the icon on Progress. X10 Confirm Delete and X11 Are You Sure also open from many other screens, listed on their cards.

Map 10 of 10: Notifications

Where each notification leads when tapped. Action buttons such as Yes and No save without opening the app, so they lead nowhere.

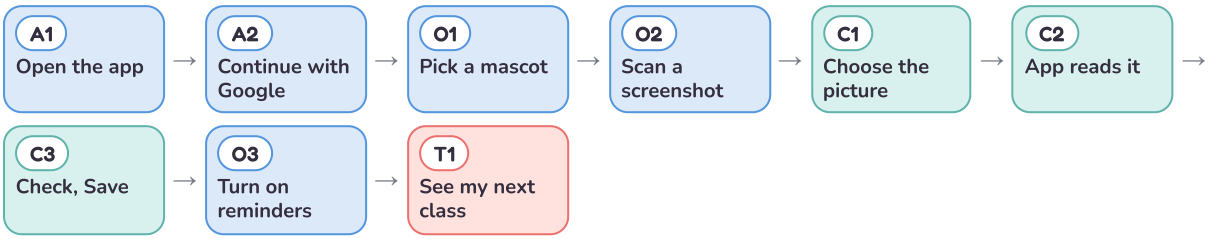

10. The main journeys

Screens only matter if they join up into something a student actually does. Check every round against these five.

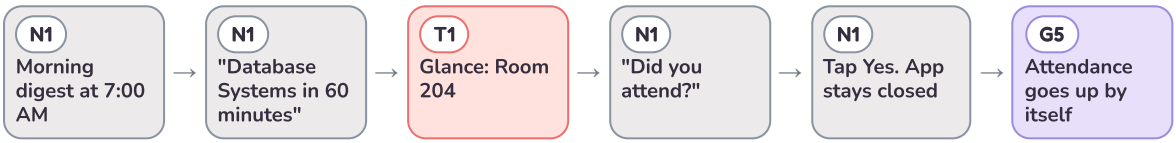

1. First minute: from install to my own classes

Goal: real classes on screen in under 60 seconds.

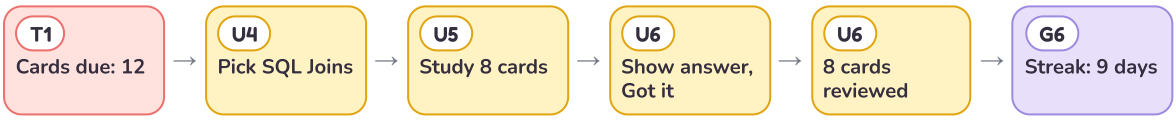

2. A normal class day

Most of the day happens in notifications. The app earns trust by being right.

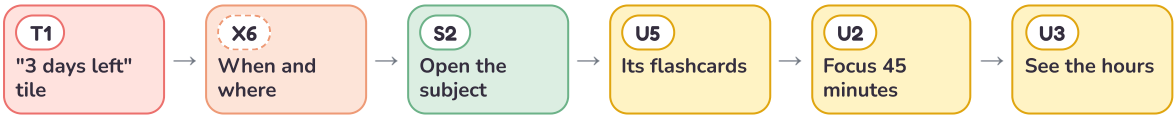

3. Ten free minutes between classes

From phone in hand to studying, in two taps.

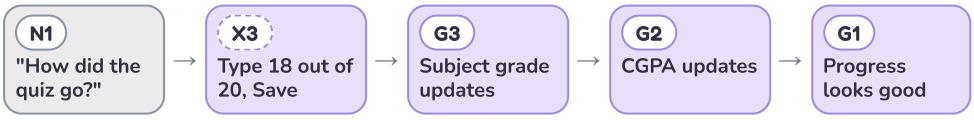

4. The night before an exam

Dark theme, calm words, no alarm.

5. After the marks come out

One notification leads straight to the updated CGPA.

11. Screen by screen

This is the part Claude Design works from. Each card says what the frame is for, what goes on it from top to bottom, and where every button leads. Sample content is in section 12.

Entry and account

A1 Splash

Screen · Frame 29 of 56, round 5

Show the brand for a moment while the app works out where to go.

On this screen, top to bottom

1. Coral gradient filling the screen
2. Large Logo in the centre: the only place the logo animates
3. Nothing else: no text, no spinner

Main action

None. It moves on by itself in under one second.

Good to know

- If the session check is slow, go to T1 and show Z1 there. Never hold the student on the splash.

Buttons and where they go

Components

Logo

A2 Welcome

Screen · Frame 30 of 56, round 5

Say what FocusFlow is in one line, then get out of the way. This replaces a login wall.

On this screen, top to bottom

1. Large Logo
2. One large Mascot, Cap, reaction "blink"
3. Line in section-title: "Know what's next, every day."
4. One line in body: "Your classes, deadlines, grades and attendance in one place."
5. Primary Button: Continue with Google
6. neu Button: Sign up with email
7. ghost Button: I already have an account

Main action

Continue with Google. It is the fastest route and needs no password.

Good to know

- No swiping carousel. Students skip them.

Buttons and where they go

A1 E7 X11

Components

Logo, Mascot, Button

A3 Log In

Screen · Frame 33 of 56, round 5

Get a returning student back in fast.

On this screen, top to bottom

1. Back IconButton
2. Small Logo and title "Welcome back"
3. Field: Email
4. Field: Password, with an eye icon to show or hide
5. Link: Forgot password?
6. Primary Button: Log in
7. Divider text "or"
8. neu Button: Continue with Google
9. Link: New here? Sign up

Main action

Log in.

Good to know

- The web page says "Growth Email" and "Access Key". Use plain words here: Email and Password.
- Wrong details: error text under the field, "That email or password is not right."

Buttons and where they go

Button or action	Goes to

Components

IconButton, Field, Button

A5 Verify Email

Screen · Frame 32 of 56, round 5

Confirm the email with a code, without leaving the app.

On this screen, top to bottom

1. Back IconButton
2. Title "Check your email"
3. Line: "We sent a 6-digit code to sara@example.com"
4. Six large code boxes, each at least 48px wide
5. Primary Button: Verify
6. Link: Resend code, with a countdown "Resend in 30s"
7. Link: Wrong email? Go back

Main action

Verify. It also fires by itself when the sixth digit is typed.

Good to know

- Only say the code was sent when it really was. If sending failed, say so and offer Resend.
- Wrong code: "That code is not right. Check the 6 numbers."

Components

IconButton, Field, Button

O1 Your Study Buddy

Screen · Frame 36 of 56, round 5

Step 1 of 3. Make the app feel like theirs in ten seconds.

On this screen, top to bottom

1. Stepper: 3 steps, on step 1
2. Title "Pick your study buddy"
3. Field: "What should we call you?", filled in from sign-up
4. Grid of all 10 mascots, 3 across. Tapping one selects it and it reacts with "heart"
5. Primary Button at the bottom: Continue

Main action

Continue.

Good to know

- The web asks for phone, birthday, pronouns, job, workspace name and font here. Do not ask for any of them. Phone and birthday are not needed, and the rest live in Settings.

Buttons and where they go

Button or action	Goes to

Add subjects myself	S3 Add or Edit Subject
Skip for now	O3 Turn On Reminders

Comes from

O1

Components

Stepper, Button

O3 Turn On Reminders

Screen · Frame 42 of 56, round 5

Step 3 of 3. Ask for notification permission when it is clearly useful.

On this screen, top to bottom

1. Stepper: 3 steps, on step 3
2. Mascot, reaction "sparkle"
3. Title "Want a nudge before class?"
4. A sample notification card using their real next class: "Database Systems in 60 minutes. Room 204"
5. Primary Button: Turn on reminders
6. ghost Button: Not now

Main action

Turn on reminders. It opens Android's own permission prompt.

Good to know

- If no timetable was added, use a general line: "We will remind you before classes and deadlines."

Buttons and where they go

Button or action	Goes to
Turn on reminders Android prompt, then Today	T1 Today
Not now Today shows the reminders-off banner	T1 Today

Comes from

O2 C3

Components

Stepper, Mascot, Button

Today

T1 Today

Screen · Frame 1 of 56, round 1

Answer "what's next?" in two seconds.

On this screen, top to bottom

1. ScreenHeader: "Good morning, Sara", small Mascot and Avatar on the right
2. Banner, only if reminders are off: "Reminders are off" with a Turn on link
3. Coral Card, the one coral thing on this screen: overline ON NOW or NEXT, subject name in card-title, "11:00 AM to 12:30 PM", "Room 204", "50 minutes left"
4. When a class has just ended the coral Card becomes "Did you attend?" with two Buttons: Attended and Missed, plus a More link
5. Two by two grid of SnapshotTile: CGPA with a ring (3.42), Next exam (3 days left), Cards due (12), Classes today in sage (3 classes)
6. Section "Today": ListRows for each class with time and room, finished ones ticked
7. Streak Card with a sun Badge: "9 day streak" and this week's days as small dots

Main action

Fab, bottom right, opens the Add Menu.

Also draw

- **T1-empty:** Brand new student. EmptyState "No subjects yet", "Import your timetable from a screenshot, or add courses one by one", Button: Scan timetable
- **T1-free:** No classes today. Coral Card replaced by a sage Card "No classes today" and Mascot "sleepy"
- **T1-done:** All classes over. Sage Card "All 3 done for today" and Mascot "delighted"

Sheet, Button, Toast

Subjects

S1 Subjects

Screen · Frame 4 of 56, round 1

See every course at a glance and open one.

On this screen, top to bottom

1. ScreenHeader "Subjects", subtitle "5 subjects this term", scan IconButton
2. Two column grid of tiles, one per subject in its light tint: code, name, attendance percent, next class
3. A low attendance subject shows a Badge with an icon and a word: "Low 64%"
4. Collapsed row at the end: "Archived, 2 subjects"

Main action

Fab opens the Add Menu.

Also draw

- **S1-empty:** EmptyState "No subjects yet", "Import your timetable from a screenshot, or add courses one by one", Buttons: Scan timetable, Add subject

Good to know

- This takes after the web's Table view. The 3D cube comes later.

Buttons and where they go

Button or action	Goes to

S2 Subject Page

Screen · Frame 5 of 56, round 1

Everything about one course in one scroll. It shows a little of each thing and links to the full screen.

On this screen, top to bottom

1. Header in the subject's light tint: back, code CS-301, name Database Systems, teacher, term, credits, target grade, pencil IconButton
2. Two tiles side by side: attendance ring 86%, grade so far A-
3. Primary Button, only while a class is on or just ended: Mark attendance
4. Section "Class schedule": day, time and room rows
5. Section "Deadlines": next 3 with countdown Badges and "See all"
6. Section "Flashcards": decks for this subject with due counts, and "New deck"

Main action

Mark attendance while a class is on. Otherwise no primary Button: this is a reading screen.

Also draw

- **S2-new:** A new subject with no data: each section shows a compact EmptyState, for example "No class times set"

Buttons and where they go

S3 Add or Edit Subject

Screen · Frame 6 of 56, round 1

Add a course by hand when the scanner is not used, or correct one.

On this screen, top to bottom

1. Back IconButton, title "Add subject" or "Edit subject"
2. Field: Subject name, placeholder "e.g. Data Structures"
3. Field: Code, placeholder "CS201"
4. Colour dots: pick one
5. Field: Teacher, placeholder "Dr. Khan"
6. Two Fields side by side: Credits, Target grade
7. Field: Term, placeholder "Fall 2026"
8. Section "Class times": a row per class with day, start, end and room, and "Add class time"
9. Section "Reminders": Remind me (minutes before), Switch: Ask "Did you attend?"
10. Primary Button stuck above the keyboard: Save
11. Edit only, at the end: ListRow Archive subject, and a danger ghost Button Delete subject

Main action

Save.

Good to know

- Only the name is required. Everything else can wait.
- Leaving with unsaved changes asks first.
- When opened from O2, Save returns to O2 so more can be added.

Buttons and where they go

Button or action	Goes to
Save Toast "Saved"	Previous screen

U2 Focus Timer

Screen · Frame 14 of 56, round 3

A calm timer with nothing else on screen. This is the Deep Work screen.

On this screen, top to bottom

1. Close IconButton top left, history IconButton top right, and no TabBar
2. Large ProgressRing, size about 260, marks 0, 15, 30, 45, time in hero-number at the centre: 25:00
3. Before starting: Pills for 25, 45 and 60 minutes, plus Custom
4. Field-style row: "What are you studying?" with subject choices
5. Primary Button, large and full width: Start

Main action

Start. Then Pause while running.

Also draw

- **U2-running:** Running: dial counting down, subject name, large Pause, smaller End
- **U2-finished:** Mascot "delighted", "25 minutes on Database Systems", streak Badge, Buttons: Done, Start another

Good to know

- While running, the phone stays awake and only the dial, the subject name, Pause and End show.
- Dark mode is especially important here.

U6 Flashcard Study

Screen | Frame 20 of 56, round 3

Review with one thumb on a bench between classes.

On this screen, top to bottom

1. Close IconButton, and "4 of 8" with a progress bar. No TabBar
2. One large clay card filling most of the screen, overline QUESTION, text in section-title: "What does a LEFT JOIN return?"
3. Primary Button at the bottom, full width: Show answer

Main action

Show answer, then Got it.

Also draw

- **U6-answer:** Flipped: overline ANSWER, "Every row from the left table, plus matches from the right. No match gives NULL." Two large Buttons in the thumb zone: Missed (soft), Got it (primary)
- **U6-done:** Mascot "sparkle" with sun: "8 cards reviewed", "Next review tomorrow", Button: Done

Good to know

- Tapping the card also flips it. Swiping right means Got it, swiping left means Missed.
- A right answer moves the card up a box, due again in 1, 3, 7 or 14 days. A wrong one sends it back to box 1.

Buttons and where they go

Button or action	Goes to
Show answer Shows U6-answer	Stays here
Missed or Got it Next card	Stays here

Plan

P1 Exams and Deadlines

Screen | Frame 7 of 56, round 2

Everything with a due date, sorted by what's next. The first view of the Plan tab.

On this screen, top to bottom

1. ScreenHeader "Plan"
2. SegmentedControl, full width: Deadlines (on), Assignments, Week
3. Next one as a large Card: "Database Systems midterm", "3 days left" in stat-value, date, time and room
4. Row of Pills that scrolls sideways: All, Exams, Quizzes, Vivas, Submissions
5. Overdue items first with a focus Badge: icon and "Overdue"
6. Rows soonest first: type Badge, title, subject dot, countdown

Main action

Fab opens the Add Menu.

Also draw

- **P1-empty:** EmptyState "Nothing scheduled", "Add an exam, quiz or deadline to get started", Buttons: Scan date sheet, Add

G5 Subject Attendance

Screen · Frame 26 of 56, round 4

Tell the student where they stand with one subject, and let them correct any class.

On this screen, top to bottom

1. Back IconButton, subject name
2. Large ProgressRing: 86% for Database Systems
3. Line in plain words, the question every student really has: "You can miss 4 more classes and stay above 75%"
4. Four small counts, each with its word and icon: Attended 22, Late 2, Missed 4, Excused 0
5. List of classes by date with status. Tapping one changes it
6. Primary Button stuck at the bottom: Mark a class

Main action

Mark a class.

Also draw

- **G5-low:** Operating Systems at 71%: Attended 20, Late 2, Missed 9, Excused 0. A warn Badge with an icon and the word Low. The line becomes helpful, not scolding: "Attend your next 5 classes to get back above 75%"

Buttons and where they go

Components

IconButton, ProgressRing, StatCard, ListRow, Button, Badge, TabBar

G6 Study Streaks

Screen · Frame 27 of 56, round 4

Reward showing up. Never scold.

On this screen, top to bottom

1. Back IconButton, title "Study streaks", plus IconButton
2. Sun hero: "9 day streak", "Best 21", Mascot "sparkle"
3. Section "This week": a small chart of habits completed each day
4. Habit rows: name, the week as small clay dots, finished days in the sage gradient, Checkbox for today

Main action

Tick today's Checkbox.

Also draw

- **G6-empty:** EmptyState "No habits tracked yet", "Add a habit to get started", Button: Add a habit

Good to know

- After a missed day the hero says "Fresh start today". Never "You broke your streak".
- Ticking gives a spring and a light haptic.

E7 Delete Account

Screen · Frame 50 of 56, round 6

Let a student delete their account and data. Google Play requires this.

On this screen, top to bottom

1. Back IconButton, title "Delete your account"
2. Plain list of what goes: subjects, grades, attendance, flashcards, and everything else
3. Line: "This cannot be undone."
4. Field: Type your password to confirm. Google accounts type DELETE instead
5. Danger Button, full width: Delete my account
6. ghost Button: Keep my account

Main action

Keep my account is safe and easy. Delete my account is available but deliberate.

Good to know

- No guilt, no tricks, no extra steps. Google Play forbids hiding this.
- Not built yet: see the owner checklist.

Buttons and where they go

Button or action	Goes to
Delete my account Toast states the real result	A2 Welcome
Keep my account	Previous screen

Notifications and system

N1 Notifications

Set · Frame 53 of 56, round 7

The app's most-seen design. A student should be able to finish many jobs from here without opening the app.

On this frame, top to bottom

1. One frame showing Android-style notification cards, stacked on a plain background
2. Class reminder: "Database Systems in 60 minutes", "Room 204"
3. Did you attend: "Did you attend Database Systems?", action buttons Yes and No
4. Did you submit: "OS lab 4 report is due in 3 hours. Did you submit?", action buttons Submitted and Not yet
5. Exam reminder: "Linear Algebra quiz in 60 minutes", "Room 301"
6. How did it go: "How did the quiz go?", "Add your marks while you remember"
7. Morning digest, expanded: "Today: 3 classes, 1 deadline", first class and first deadline
8. Small app icon: the mark in one colour. No emoji in any notification

Main action

The action buttons. They save without opening the app.

Good to know

- Each kind can have its own sound and vibration, so the buzz alone tells them apart.

Buttons and where they go

Button or action	Goes to
Tap class reminder	S2 Subject Page
Yes or No on Did you attend	Saves, app stays closed

Linear Algebra	MT-204	Ms. Nida Shah	Room 301	3	64% (too low)	B-	#D97706
Technical Writing	EN-205	Ms. Sana Iqbal	Room 110	2	95%	A	#DB2777

Today's classes	Data Structures 9:00 to 10:30 AM (done). Database Systems 11:00 AM to 12:30 PM (on now). Operating Systems 2:00 to 3:30 PM (next).
Exams	Database Systems midterm in 3 days. Linear Algebra quiz in 6 days. Operating Systems viva in 12 days.
Assignments	9 in all, 5 submitted. To-do (3): Technical Writing essay draft, 1 day overdue. Operating Systems lab 4 report, due Thursday at 11:59 PM. Linear Algebra problem set, due next Monday. Doing (1): Database ER diagram, due Friday. Done (5): including Data Structures lab 6.
Flashcards	12 cards due today. Deck "SQL Joins": 24 cards, 8 due. Question: "What does a LEFT JOIN return?" Answer: "Every row from the left table, plus matches from the right. No match gives NULL."
Habits	"Review flashcards daily": 9 day streak. "Read one chapter": 4 day streak.

Subject colours are data the student chooses, from the app's own list, so these hex values are the one exception to "tokens only". On a subject's page they appear as a light tint.

Words to use

Use	Not
Email, Password	Growth Email, Access Key (on today's web login)
Attended, Late, Missed, Excused	Present, Absent, or status codes
Show answer, Missed, Got it	Reveal, Again, Correct
Fresh start today	You broke your streak
That did not work. Your data is safe.	Oops! Error 500
Deep Work, Study streaks, Assignments	Other names for the same features

13. What needs doing outside design

Claude Design only draws the screens. These things sit outside it, and some must be finished before the app can go on the Play Store.

#	Item	What it means	When
1	**Delete account**	Google Play requires an in-app way to delete an account and a web link for the same. I searched your backend and found no delete-account feature. E7 designs it; the server part still has to be built before launch.	Before launch
2	**Real push notifications**	The app uses web push today. A store app needs Firebase Cloud Messaging, which is free. N1's action buttons depend on this.	Before launch
3	**Google sign-in on Android**	The web flow will not carry over as it is, and needs the native version.	Before launch
4	**Scanner on the phone**	Tesseract.js runs in a browser. In React Native, use a free on-device reader. The rule of "no paid AI" still holds.	Before launch
5	**Privacy policy link**	The store listing needs a public web address for it, and for account deletion.	Before launch
6	**12 testers for 14 days**	New personal developer accounts must run a closed test with at least 12 testers opted in for 14 days in a row before applying for production access.	Before launch
7	**Attendance limit**	New idea: the 75% line on G4 and "You can miss 4 more classes" on G5. The app has no limit setting today, so one is needed. Confirm the number your university uses. The sums count Late as attended, which you should also confirm.	Your decision
8	**Which features wait**	Ahmad confirmed on 8 November 2026: Notes, Budget and Goals stay out of Version 1. They stay on the web, so nothing is lost.	Decided
9	**Five tabs**	A proposal. Watch one friend use the prototype silently for five minutes. If they hunt for something, we move it.	Test it

Checked, and not checked

- **Checked by script:** every button leads to a real frame, every frame can be reached from the app's start or a notification, every frame has a way out, and every sheet can close.
- **Checked against your code:** feature names, form fields, exam types, flashcard words, empty-state wording, and which features exist.
- **Checked with Google:** the 12-tester rule and the account deletion rule.
- **Not checked:** real students have not seen this. No screen has been drawn or tried on a phone yet. The audience notes are assumptions.
